

THE MEETING IN EFKARPIA

APPENDIX

A PERSONAL EXPLANATION OF WHAT A TEACHING UNIT IS.

A teaching unit or didactic unit was traditionally called lesson. Well, there are some differences between a teaching unit and a traditional lesson. Traditional lessons were made up by contents and activities. Theoretically speaking didactic or teaching units are made up by several elements or parts:

**Title - Rationale - Goals/Objectives - Contents -
Methodology - Activities - Resources - Timing - Evaluation**

In my opinion, in our didactic units we should focus only on these elements: **title, contents and activities**.

Other important elements: **rationale, goals or objectives** were already designed in the project and they were proposed considering the specific units we were to prepare. I mean they are valid for all the units because, according to the project, they will form a whole, a set.

Page 12 of the project: All the work performed will form a whole; still it will be structured in didactic units, the contents of which will be the different artistic expressions that convey the proposed concept, idea or value.

The other elements: **methodology, resources, timing and evaluation** are important, of course, but not to the point of being necessary to be specified in a project so large as our project. Those elements can be determined at the moment of working on the unit in an specific class by each teacher.
